

DUAL SIDE PLACEMENT

For dual side placement of nitrogen, phosphate, potash, and micro-nutrients when planting row crops

CASE IH **800-1200**

BENEFITS OF DUAL FERTILIZER PLACEMENT

- ▶ Double your rate of fertilizer while keeping it in two separate bands close to the furrow to propagate downward root movement
- ▶ Lower rate versus broadcasting for zone building
- ▶ Safer at higher rates for seedlings
- ▶ Great for micro-nutrient packages of fertilizer that can harm seedlings
- ▶ Located behind the opener on the planter, keeping the gauge wheels clean for better depth control—no build-up from opener in front of the row unit
