You do not want the drive shaft to hit the manifold bracket! (It will if you do not bolt the manifold behind the bar)

bend manifold for center **right** side **behind** the bar

bend manifold for center **left** side **in front** of the bar

Wires are threaded through center bar

Fill hose out the back of the drill
controller (left); Run Hold (upper right); power cords (lower right—black one goes to battery and grey ones go to pumps on drill); pressure gauge with mag mount (upper center)

check valve

center left manifold & plumbing behind the tank

manifold on one section

fill hose out the back of drill

bottom of tank and filter system

pump system on the tower that mounts in front of the tank

Rebounder & Straight Shot (keeps fertilizer off drill and press wheels)
